I have two tables: Discounts (id, product_id, discount) Purchases (id, price, discount_id, timestamp) What I want is for each purchase, to list a full product description (product_name, product_description, product_code), the timestamp of the purchase, the average price, and the discount applied. So for example, I have 2 purchases with a timestamp of t0 and a discount applied of d1. I want to group purchases by product_id and do the averages but also join in the discounts to get the avg price. A: select p.product_id, p.timestamp, p.price, p.discount_id, d.discount, avg(p.price) as avg_price, p.product_name, p.product_description, p.product_code from purchases p join discounts d on p.discount_id = d.id group by p.product_id, p.timestamp, p.price, p.discount_id Using a1d647c40b
