This adjustment enables you to play with the brightness of an image and also gives the impression that the image is moving between light and dark. The histogram is a useful tool when exposing images. (See the section, "Shooting.") With this tool, the color and brightness of an image are displayed on a graph that can be used to determine where the brightness of your image is most easily adjusted. Play with a color photograph of a flower and you'll see what this is all about. In Figure 2-14, the base image was exposed to capture the highlights of the flower. FIGURE 2-14: The image was exposed to bring out the highlights in the flower. To convert it to black and white, you must make the image appear less bright. To do so, you must underexpose it. Figure 2-15 shows the final black-and-white version of the same photo. You can check the image's brightness levels by clicking the image (as shown here). FIGURE 2-15: The image was exposed to capture the black color of the flower. Here's a valuable tip: Wait until you get the image you want before you expose it. If you try to capture the highlights in a flower right away, they'll remain saturated. If you do shoot in raw-image mode, you can use an exposure compensation tool such as that provided by the manufacturer to fix any problems in the finished image. However, you don't have to — exposing for the highlights can solve

Today I want to share with you some cool Photoshop tips and techniques that can be used to speed up your workflow and save time. The list contains the most useful Photoshop tips that I have tested over the years. The desktop version of Photoshop and Elements is a great tool, but your workflow will be much faster with the web-based Photoshop CC and Elements CC. You can download them for free or take a look at our guide on how to switch to the cloud app on Windows 10. Note: I only cover the techniques in the desktop version of Photoshop and Elements. In the meantime, I'd like to remind you that the list of Photoshop tips and tricks I am sharing on the site has been updated many times over the years. Sometimes it's worth re-visiting the articles to see if there are any new tweaks that would be more useful for you. Tip 1: How to use Photoshop or Elements with an E-Reader Whenever I'm designing images for my blog posts and want to work offline, I turn on my E-reader and Photoshop Elements. This way, I can work on images in a free, offline version of the program. It's a great way to work quickly. When I'm done, I can easily send those images to my website (or to any other design) because they are saved as JPEGs. If you don't want to work offline or if you prefer to use the software on a Mac, I'd recommend downloading Adobe Bridge. Image: Shutterstock While you can do a lot of great things with Photoshop Elements, the biggest limitation is the lack of a RAW editor. Tip 2: Turn off auto-save and enable Layers Whenever you begin working on an image in Photoshop, turn off the autorwop switch and enable the Layers switch. Then, whenever you want to save the file, you should name

it. Then press Enter or Return when asked to name it. This way, it will be much easier to find the image later and change its name for another image without having to scroll through your library. Tip 3: Use layers to create a mask It is hard to remember the exact names of each layer you are working on. Instead, use a color or filter to define which layers are in use and which ones are not. For example 388ed7b0c7

Severe weather has hit Montana. Missoula, MT — Severe weather has hit Montana. A large storm system has brought hail, 40 mph winds, and tornadoes to the state. Severe weather began in Alberta, Canada, and tracked across the United States. Hail up to 3-4 inches in diameter fell in northeastern Montana. The National Weather Service has confirmed at least four tornadoes caused by severe weather in Montana. The NWS says the storm system has brought hail up to 3-4 inches and 40 mph winds to Missoula, MT. The National Weather Service says they've received reports of the damage in Missoula. The city could see an inch of rain, with 40 mph winds. There are no immediate reports of injuries or deaths. The NWS says the severe weather remains ongoing and is under investigation. The news source in Missoula, WMTW, is reporting one of the tornadoes occurred on airport property. The rest of the storm system is headed north out of the state. It's expected to exit the state around 8 AM.A couple of weeks ago I received a gift, most likely "stolen" by my husband, of a cat. She is a blue-and-white long-haired domestic cat with a silky blueish face and the most beautiful eyes... But she doesn't like other cats in the house: they are pretty much allergic to her fur. I put her in my room, and I can't wait to take her on a walk. I love her and how she greets me at the door with a purring sound... I think I'm in love with her. I'd like to find a photo of her too, if you know where to post it. Sorry for my bad English. I thought about putting that link on your exchange post, but thought you'd already posted it. You can post a link to that page in a comment here. I try to keep the posts lean, meaning that if I have a four or five different people I'd like to thank, I'll just list a couple of them, and add a generic appreciation or thank-you at the end. I've noted in bold your "additional thank you" lines. I'm very busy tonight, however, and so I hope my apologies for any rude sniping. Check out the Website for photos of all the cats I've received
