## **Symantec Internet Threat Meter Product Key PC/Windows**

Symantec Internet Threat Meter is an innovative monitoring software application for Microsoft Windows. It is designed to be in the middle of your computer system and “keep up” with all the latest threats, and provide you with the practical tools to cope with them. It will let you detect, deal and remove the most harmful viruses, trojans and worms available. This is the only security product that will let you choose what tools to use when removing a threat, the 'Purity' panel of Symantec Internet Threat Meter. Symantec Internet Threat Meter allows you to control when 'Purity' is used, and how effective it is. Before you install and start using Symantec Internet Threat Meter, you need to install Symantec Security Message Broker (SSMB). This enables Symantec Internet Threat Meter to get its threat information from Symantec's online database, the Symantec Vulnerability Response database, and from the local Symantec response system. Symantec Internet Threat Meter is a full-featured antivirus application that provides state-of-the-art real-time security for the entire enterprise - not just PCs. In addition to preventing viruses, it provides antispysware and firewall tools to detect

and remove programs that spy on your online behavior and steal your sensitive information. Symantec Internet Threat Meter will scan your computer for viruses and spyware. It will also give you information on things like:

- \* Health of your system and internet connection.
- \* Risk level for your computer or internet connection.
- \* Computers where the virus has been installed.
- \* Latest security product updates
- \* Latest threats and removal tools
- \* Vulnerabilities that are new and unpatched.

Symantec Internet Threat Meter is the ideal companion for the Symantec Internet Security and Symantec Endpoint Security as it will give you an excellent online threat protection for your enterprise. It also includes:

- \* Prevention and removal of malware including viruses, spyware, adware and Trojan horses
- \* Intrusion detection and protection against web-borne attacks
- \* Removal of potential viruses and malware
- \* Quarantine and deletion of potentially infected files
- \* Block of potentially malicious websites
- \* Scalable and dynamic scanning, analysis and cleaning of confidential data, including user credentials
- \* Analysis, reporting and investigation of threats to systems and networks
