AutoCAD 2019 has an integrated cloud storage that lets you access or link to your files. Whether it is cloud storage, your Dropbox account, Google Drive, Box.com or One Drive or other Cloud storage, the app will download the files to your device and save them to your file storage. File System Analysis In previous AutoCAD releases, the user had to manually import files from other applications. This can be done using a file transfer utility or using a direct file transfer tool. AutoCAD 2018 (and earlier releases) could open files in the host application. For example, you could open a text file in Word, a spreadsheet in Excel, a presentation in PowerPoint, a drawing in AutoCAD and etc. This makes it much easier for the user to import and create new files in other programs. AutoCAD 2019 will launch an app where you can select and import files. This is an easier process. It could be a file in the cloud storage, an email attachment, or even a file in your file storage. Features Features of AutoCAD 2019 are: Integrated CAD File System Save drawings as PDF or other file formats. Manage various layers (groups) with different levels of visibility. Change and edit styles in the same context. Draw automation in text or multi-line text commands. Draw splines from center to center or from corner to corner. Directly draw or edit spline paths. Adjust objects using fit and snap commands. Scale drawings to any aspect ratio. Import other drawing files as if they were part of the current drawing. Edit images of any file type in the drawing area. Duplicate drawings and reuse them in different files. Use the built-in library to create shapes, dimension lines, splines, and so on. Add comments and edit text. Add notes and associate text with a drawing. Add key objects to drawings and maps. Preview and print 2D drawings. Integrated 3D modeling in Model Browser and Project Browser. Add views and see them side-by-side in the View List. Use multi-cursor editing in the Model Editor, Design Reviewer, and Annotator. Be productive on any device with the web app. Grow along

Raster graphics AutoCAD supports a variety of raster graphics formats. These include BMP, GIF, JPEG, PNG, PIC and TIF. AutoCAD allows the creation of collage-style images (similar to Microsoft Powerpoint) by "stitching" them together using a technique called vector image alignment (referred to as VIA). This can be used to create collages of drawings of different types, such as 2D plans, 3D models, rendered renderings, CAD models and more. AutoCAD can also output high-quality rasterized PDFs. These images are extremely useful for delivering information, as they retain layout, viewport and layout properties. However, because they are raster images they have a drastically lower resolution compared to vector images.
